

High School Building Size Recommendation

Jerome McKibben, PhD.

McKibben Demographic Research

Disclaimer: I have no experience or training as an Architect or Educational Specifications expert. I do, however, have 30 years' experience conducting population and enrollment forecasts. I have worked in over 1,500 school districts and completed over 100 school redistricting projects.

Given that the Andover Public School District high school enrollment is forecasted to reach 1,730-1,782 students in the 2030-31 school year, McKibben believes it is reasonable for the district to design a high school building for at least 1,900 students for a building with a minimum life expectancy of 50 years.
